

# Let's get started >

Unpack your **NB8WVPN ADSL2+ Wireless VPN Modem Router** and check you have the following items

- 1 x NB8WVPN ADSL 2+ Wireless Modem Router
- 1 x 18VDC 1 Amps power supply
- 1 x RJ -11 ADSL Line connection cable
- 1 x RJ -45 10/100 Ethernet cable
- 1 x Driver/Manual & Utility Software CD
- This printed Quick Start Guide

If you have all the items listed above please turn over for instructions on getting started with your new Gateway.

### Connecting your device

1. With the supplied Ethernet cable, connect your PC to the LAN port
2. With the RJ-11 cable connect your telephone wall socket to the ADSL port of your NB8WVPN

**Note:** If you intend on using your NB8WLAN on the same socket that your telephone is connected to you must use an ADSL Splitter Filter suitable for your connection speed, we recommend the Telstra certified NetComm EM1550

3. Connect the power cable
4. Power on your PC and turn on power to your NB8WVPN
5. Open a web browser to check your connection

### Establishing a Wireless Connection

You can connect multiple wireless devices, including laptops, desktops and PDA's to your NB8WVPN by following the 2 basic steps

1. Using your wireless device, scan the wireless networks in your area and select the network called **wireless**. Then click connect
2. Enter the following default security key: **a1b2c3d4e5**

**Note:** To ensure wireless security, we recommend you change the default settings through the User Interface. For more detail, please consult your User Guide
