

NETCOMM CALLDIRECT SERIES

ConnectDirect

Fixed IP Addressing Bureau

NetComm

NetComm Commercial

If you require point to point or point to multipoint routing with fixed IP addressing over a cellular wireless connection.

NetComm's **ConnectDirect** fixed IP addressing bureau can offer you the ability to establish IP sessions in either direction between your NetComm CallDirect Series cellular router and your backend over NetComm's closed community IP network, anywhere there is Telstra's extensive Next G™ network coverage.

HOW THE CLOSED COMMUNITY WORKS

As a member of the community you would share NetComm's private IP network with other NetComm customers exclusively. As this is a closed IP network you are secure in knowing no one will have access to your devices from the public internet.

You choose your own user names and passwords NetComm then manages the authentication on to the network in-house. The service is offered on a subscription fee basis, no large up front installation costs.

TYPICAL USERS

- ☉ Customers unable to cost justify installing a fully managed service with their communications carrier
- ☉ Hardware vendors with large single user customer base, needing server to remote client IP connectivity.
- ☉ Temporary installations where customers are waiting for their permanent VPN to be established with their chosen carrier.

GENERAL INFORMATION:

- ☉ Minimum equipment required – 2 devices one for the remote end, the other on the host end of the VPN.
- ☉ User Name and Password – Chosen by you in both cases
- ☉ Data connection required – Subscription to one of Telstra's mobile data plans. Speak with your Telstra representative to advise on which plan will suit your requirements best.
- ☉ Annual Subscription Fees * – \$100.00 Per Endpoint
– Additional set up fee of \$200 per unit is chargeable if non-NetComm products are used.
- ☉ Minimum subscription period – 12 months per router subscription fee paid in advance.

* All pricing is plus GST
