New Features

Bug Fixes / Modifications

1.57.8

1. Fixed 3G PPP connection issue with some carriers (Internode 3G and Doudou)

2. Fixed incorrect HELP button content and hyperlinks in the status page

1.57.7

1. Fixed NTC-790 GUI banner description

1.57.5

1. DHCP Server field in GUI filling with unexpected string after RESTORE FACTORY DEFAULTS caused DHCP stops working.

2. Fixed GUI "tableHeader.gif" display problem if the screen resolution is set to more than 1920 pixel.

3. Both links can be used for phone module firmware and boot loader upgrade. http://192.168.1.50/linkFiles/FlashUpload.html or http://192.168.1.50/FlashUpload.html

4. Fixed UI sub-menu 'VPN'link to an incorrect URL, cannot go to "VPN" page from main menu. (only applicable to the NTC models loaded with VPN patch)

5. ATI command always returns return incorrect router description.

6. Fixed intermittent long response time for some AT command

1.57.1

1. Fixed CNS watch-dog acts too quickly, during high traffic operation, the router may reset.

2. Fixed incorrect SNMP ppp connection status

3. Fixed SNMP not setup when configuration exports: the SNMP does not work until the user applies SNMP settings when the configuration exported
