

## Let's get started >

- 1 Set your Broadband Modem into Bridge Mode

*Note:* Refer to your Broadband Modem User Manual for instructions.

- 2 Connecting your Router

- Power off all your devices
- Using your Ethernet cable, connect your Broadband Modem to the WAN port found at the back of the Router.

- Connect your PC to any LAN port (1,2,3,4)

- Connect the power cable (12VDC)
- Power on the PC, Modem and Router

## Setup option 2

- Open up your web browser and type into the address field:

**192.168.1.1/wanpppoe.asp**

- Enter the following details

User name: **admin**  
 Password: **admin (lower case)**

Then click **OK**

- Enter your **Internet Service Provider (ISP's) User Name** and **Password** into the fields as shown below. The Service Name can be left blank. Click **Apply** with the default settings.

- The following page will appear. Click **Apply**

- See below for instructions on how to establish a wireless connection.

If you are unable to set your Broadband Modem to Bridge Mode or do not need to network multiple devices, follow the steps below:

- Connect your Router – refer to the step 2 on the previous page
- Open up your web browser and type into the address field:

**192.168.1.1/lan.asp**

- Enter the following details

User name: **admin**  
 Password: **admin (lower case)**

Then click **OK**

- Enter the following numbers into the fields listed below:

IP Address: **192.168.3.1**  
 Start IP: **192.168.3.2**  
 End IP: **192.168.3.254**

- Click on Apply/Submit or press OK

## Establish a Wireless Connection

You can connect multiple wireless devices including laptops, desktops and PDA's to your 11n Wireless Router by following the 2 basic steps:

- Using your wireless device, scan the wireless networks in your area and select the network called **wireless**. Then click **Connect**.
- Enter the following security key: **a1b2c3d4e5**
