ADSL2+ Wireless N300 Modem Router

NetComm
NB304N Quick Start Guide

1 Connecting Your Device

Computer

Telephone
wall socket

Splitter
Telephone

1. With the supplied Ethernet cable, connect your computer to any of the 4 LAN ports on the back of the NB304n

2. Connect the supplied ADSL2+ Splitter/Filter to your telephone wall socket

3. With the supplied RJ-11 telephone cable, connect the ADSL port on your NB304n to the socket labelled ADSL Modem on your Splitter/Filter

2 Configuring Your Device

You can configure your NB304n via the web based configuration pages by:

1. Open a web browser (e.g. Internet Explorer, Firefox, Safari) and type in http://192.168.1.1 into the address bar and press enter

2. When asked for a username and password, enter the default login details of admin into both the username and the password fields

3. Select 'Basic Setup' and then 'Quick Setup' from the left hand menu and follow the instructions to enter the information provided by your ISP to connect to your ADSL service.

3 Establishing a Wireless Connection

You can connect multiple wireless devices, including laptops, desktops and PDA's to your NB304n by following these 2 basic steps:

1. Using your wireless device, scan the wireless networks in your area and select the network called 'NetComm Wireless'. Then click connect.

2. Enter the following default security key: a1b2c3d4e5

Please note: To ensure wireless security, we recommend you change the default settings through the User Interface.

For more information on wireless setup or configuration, please refer to your NB304n User Guide.

4 Congratulations

Now you have successfully completed the set-up process.
