

Hardware Installation | VelComm | V

- With the supplied Ethernet cable, connect the LAN port of your modem/router to the WAN port on the back of your VoIP ATA
- If you would like your PC to be connected to the network through your VoIP ATA connect another Ethernet cable (not supplied) from your PC to the LAN port on the back of your VoIP ATA.

- 3. Connect your telephone handset to the **Phone** port.
- 4. Connect the **Line** port to your telephone wall socket.
- 5. Connect the supplied power adapter and press the power button to turn your ATA on. After 2 minutes the **Power** and **Ethernet** LEDs will be lit.

- 1. Insert the supplied CD into your PC. The CD should auto-run.
- 2. The default Internet access is DHCP Client Mode. Click on **WAN Configuration** to change the Internet access type.
- 3. Enter the SIP Proxy Domain, Proxy Server, Outbound Proxy, Username, Auth. ID and Auth. Password that are provided by your VSP
- 4. Click on **Setup** and the VoIP ATA will start to configure. Follow the prompts to complete the configuration.

5. After a few minutes the VoIP ATA should report that the setup has been **successsful**

Troubleshooting

Cannot establish a connection

- You can use the web interface for more advanced setup options
- Open a web browser (e.g. Internet Explorer, Safari) and type 192.168.22.1 into the address bar and press Enter
- Enter the default username and password which is admin for both

-	Under the Configuration tab on the left hand menu, select WAN for advanced Internet settings
-	Under the Configuration tab on the left hand menu, select VoIP and click on SIP Service Provider for advanced VoIP settings

Click on Save Settings/Reboot to use the newly entered settings

Stops your ADSL signal from interfering with telephones and fax machines

- Designed to get the best from your ADSL2+ Internet connection
- Telstra Approved
- Splitter and filter in 1. Connect your telephone/fax and ADSL modem to a single telephone wall socket
